

CODSOFT Artificial Intelligence Internship

Task 1: Chatbot with Rule-Based responses

INTRODUCTION

This project is a simple Rule-Based chatbot developed using python.

The chatbot interacts with users and responds based on predefined rules and conditions.

OBJECTIVE

To develop a simple chatbot using python and understand the basics of Artificial Intelligence, Logic building, and user interaction.

TECHNOLOGY USED

- Python – 3
- visual Studio Code

HARDWARE REQUIREMENTS

- Computer/Laptop
- Minimum 4GB RAM

SOFTWARE REQUIREMENTS

- Python installed
- VS Code editor

ALGORITHM

- **Step 1:** Start Program
- **Step 2:** Take input from user
- **Step 3:** Convert input to lowercase
- **Step 4:** Check input unit using if-else condition
- **Step 5:** Provide appropriate response
- **Step 6:** Repeat until user enters “bye”
- **Step 7:** End Program

SOURCE CODE

while True:

 user = input("You: ").strip().lower()

```
if user == "hello":
    print("Bot: Hello!")
elif user == "how are you":
    print("Bot: I am fine. what about you?")
elif user == "what is your name":
    print("Bot: I am Python chatbot.")
elif user == "help":
    print("Bot: Ask me hello, how are you,name, bye")
elif user == "bye":
    print("Bot: Goodbye!")
    break
else:
    print("Bot: I don't understand. Type 'help' for options.")
```

OUTPUT

User: hello

Bot: hello!

User: how are you

Bot: I am fine. what about you?

User: what is your name

Bot: I am python chatbot

User: help

Bot: Ask me hello, how are you, name, bye

User: bye

Bot: Goodbye!

RESULT

The chatbot successfully interacts with users using predefined rules and provides correct responses.

CONCLUSION

This project helped in understanding Python programming, conditional statements, and basic chatbot development.
